EcolineGroup is all about crafted ecological engineering.

**ecoline**<sup>®</sup>  
GROUP

Founded more than 40 years ago, EcolineGroup has been designing and promoting solutions for sustainable progress and introducing positive innovations for the cleaning sector. Built in 1983, our company has been operating both in the indoor and outdoor cleaning business, firstly by developing our own line of nontoxic products but also by designing and selling high-end machines for environmental cleaning. Some years later we created our first multi-purpose cleaning car prototype, as we felt the need to find a solution to all the new needs related to outdoor cleaning in the modern world. Thus far, we have a wide range of high-tech vehicle options in our catalogue, all designed by our internal pool of engineers and all equipped with both electrical and ecological tools and components.

## CLEANING IN 2025: MODERN NEEDS AND MODERN SOLUTIONS

Today's world is constantly changing and moving towards new technologies that are shaping our lives. The cleaning world is one of the many markets that have been hit by a new technological and cultural change, following a higher demand for cleaned and sanitised spaces and solutions able to reduce our environmental impact. This being said, companies' and people's attention towards sustainability, ecology and more responsible lifestyles, has led the market to a more specific offer of products and services, able to combine successful outcomes with smarter ways of working.

# OUR PRODUCTS: THE BEST SOLUTION

Being in the cleaning business for 42 years, we have understood, before many others, the importance of providing a service that not only is highly innovative but also functional and smart. Our products totally embrace a visionary and futuristic approach to the cleaning world. Specifically, every vehicle of ours is electric powered and provides many application options, including the use of hot water and the possibility to remote control the car for faster and easier workflows. This being said, each car can also be personalized depending on customer needs, and all the main functionalities can be upgraded when needed. All of this combined with a particular attention to the elegant design of the final product, hiding all the mechanics inside.

## OUR PRODUCTS:

## TECHNOLOGY AND RESEARCH

Our technology guarantees a faster and more efficient result, giving operators the chance to finish a job within an amount of time 7 times shorter compared to other professionals operating with more out-dated technologies. Furthermore, the amount of water being consumed is ten times smaller than any other similar vehicle, and the ecological impact of the whole cleaning process is considerably smaller. In other words, we believe in a brand new future for the cleaning business.

## EVERLASTING INNOVATION

Our product offer strikes the perfect balance between advanced engineering and functional innovation. Every EcolineGroup product is designed, engineered and developed to be seamlessly integrated into a comprehensive 360° solution, ensuring not only outstanding results but also a smooth, fast, and efficient workflow.

All our solutions are designed to be integrated with one another, depending on the needs of each client and project.

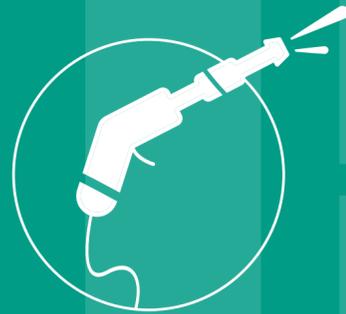

## KETAINO SANITIZER

KeTaino is a fluid atomization system, operated by a continuous compressed air flow (minimum 2 HP, 6 bar), capable of generating immediate fog (mist) in the surrounding air. When used in combination with sanitizing solutions — such as Active HACCP, which is made of bio-ethanol and Quaternary Ammonium Salts — KeTaino becomes a powerful tool for environment sanitization and disinfection.

For optimal performance and excellent results, it is recommended to use KeTaino in conjunction with the appropriate sanitizing product, allowing uniform diffusion of the mist throughout the space.

# HYDRO AIR:

# THE CLEANING CAR FROM THE FUTURE

Urban areas sanification, historical sights cleaning, HCCP sanification, graffiti removal, post accident intervention;

Electric mode indoor interventions, solar panel cleaning, chewing gum removal, moss removal;

Septic tank discharge, decontamination, flood and canal unblocking both with hot and cold water.

# THE HYBRID REVOLUTION FOR CLEANING AND DISCHARGING

Less fuel consumption, less Co2 emissions, quiet and fast;

Hot water and vapor to optimize time and energy;

Safety and comfort with a PLC remote control.

## BUT HYDRO AIR IS ALSO:

Highest protection with a Polifoam and Perallumin chassis;

High Mean Time Between Failures Parameters (MTBF);

All functionalities driven by PLC ( Programmable Logic Controller);

Remote control;

Electrical power up to 50kW;

Ability to provide a 360° deep cleaning.

# ESG: BEING SUSTAINABLE

The impact a company can have on its surrounding ecosystem has become vividly clear, whether it's on a global scale or within its local community. At the same time, people have become increasingly concerned about ESG issues such as climate change, human rights and executive compensation. Given that stock markets traditionally mirror public sentiment, investors have recalibrated their asset management strategy to focus not only on financial performance but also various ESG factors. Now more than ever, businesses are being scrutinized by institutional investors looking to align their investment strategies with their values—namely their ESG considerations. ESG stands for **environmental, social and governance** and refers to a set of standards used to measure an organization's environmental and social impact. This being said, EcolineGroup has embraced these values fully, and has built its product offer onto its will to support today's professionals through this ecological transition we are now all experiencing.

# URBAN REDEVELOPMENT

Behind every renewed space is EcolineGroup's commitment. With our environmental and urban cleaning technologies, we bring new life to the places around us—every single day. And we're just getting started.

EcolineGroup is sustainable innovation, rooted in tradition.
